**Project completion:** October 2008

Pool overflow feature

Footpaths through Place Belgat

Aerial view of beach bar and boat house

### Architects' scope of work:

Macbeth Architects were appointed to design and develop the Waterfront Village which formed part of the original Anahita Integrated Resort master plan.

The works included developing the client's brief, designing the various component parts of the village, each building having its own identity and special planning and detail design requirements. The architect's scope of work continued into the construction documentation stage, technical coordination and ultimately the construction supervision and handover of the project.

### Project description:

The Anahita Waterfront Village is the heart of the

Beach Bar
